Signatories: Islamic Republic of Iran, Kingdom of the Netherlands, Republic of Sudan, Kingdom of Saudi Arabia, Argentine Republic, Japan, Russian Federation, Republic of Korea

The Security Council,

Affirming the applicability of existing International Humanitarian Law, in particular the Geneva Conventions and their Additional Protocols to Autonomous Weapons, and by extension, the usage of Artificial Intelligence in Autonomous Weapons,

Recalls Article 36 of Additional Protocol I to the Geneva Conventions, obliging states to conduct national legal reviews of new weapon systems,

Emphasising the inherent right of Member States to individual and collective self-defence as discussed in Article 51 of the United Nations Charter,

Recognising the ongoing threat posed by Non-State Armed Groups to the sovereignty and security of Member States,

1. *Recognises* the essentiality of AI-based autonomous weapon systems in defence systems for Member States facing asymmetric and/or high-intensity threats to the security of their state;
2. *Condemns* the repeated usage of AI-enabled Weapons and Autonomous Weapons by Non-State Actors and Member States, which violate state sovereignty and endanger regional

stability as well as peace;

3. *Emphasises* that politically motivated international restrictions on AI usage in armed conflict may undermine the ability of sovereign states to defend their populations effectively in the face of an active threat;
4. *Rejects* the imposition of externally enforced bans, oversight mechanisms, and/or technology disclosures that Member States may believe endanger national security, with special emphasis on states under threat from extremism and/or hostile regimes;
5. *Recognizes* the sufficiency of existing IHL mechanisms as applicable to Autonomous Weapons and encourages in-depth discussion of this matter under the Convention on Certain Conventional Weapons- Group of Governmental Experts;
6. *Recommends* Member States to implement a technology hardening framework in the development, deployment and export of AI-enabled autonomous weapons systems;
7. *Calls upon* Member States to adopt National Red Line Policies, exercising Article 51 of the United Nations Charter to retain the inherent right to self-defence against the threat posed by the deployment or attempted use of AI-enabled autonomous weapon systems.

ANNEXURE A

Technology Hardening Framework

Article 1: Composition

The Hardening framework shall comprise tamper-resistant hardware, secure boot and attestation protocols, hardware-enforced geofencing, self-deactivation and anti-tamper mechanisms, internal forensic watermarking and threat detection in order to prevent unauthorized usage, diversion to non-state actors and unlawful application of force.

Article 2: Legal Basis

Urges states to align with such implementation with obligations under IHL including Article 36 of Additional Protocol I of the Geneva Conventions, which requires national legal reviews of new weapon systems, as well as the guiding principles of the Convention on Certain Conventional Weapons (CCW) Group of Governmental Experts concerning predictability, human control, and precaution in the design and deployment of autonomous weapons.

Article 3: State Responsibility

Recognizes that these safeguards serve as practical enablers of State Responsibility and command accountability under the jurisprudence of the ICJ (1996 Nuclear Weapons Advisory Opinion), reaffirmed by the Montevideo Convention.

Article 4: Export Control

Encourages Member States to incorporate these standards into national export control regimes, consistent with international arms control practice and domestic security regulations to prevent destabilizing proliferation of AI technology and its military usage. This aims to reduce possible malicious usage by Non-State Actors and other non-compliant states.

ANNEXURE B

National Red Line Policies

Article 1: Policy Definition

Red Line Policies will constitute policies that define and publicly communicate clear, non-negotiable boundaries regarding the use of AI-enabled autonomous weapons, with special emphasis on usage by Non-State Actors. This policy is grounded in the principles of necessity and proportionality.

Article 2: Recommended Limitations

It is recommended that member states have well-defined and measurable behaviours that are tied to obvious harms that are inherently severe in nature, including but not limited to targeting of civilians or gross violation of national sovereignty.

Article 3: Escalation Matrix

Member states are advised to establish an internally managed confidential escalation matrix, that allows for a system to match the severity and context of a breach to a set of pre-authorised and proportional set of responses. It is advised that each escalation step is reviewed by a designated National Security Authority to ensure compliance with the IHL and the principle of proportionality as is done by Israel's domestic Red Line Policy.

Article 4: Compliance with IHL

To further ensure compliance, member states should ensure that tiered escalation matrices align with IHL and are subject to domestic legal and ethical review following Article 36 of the IHL and obligations under the Geneva Conventions.

Reaffirm that member states must ensure that any autonomous weapons systems developed, deployed, or exported comply with IHL principles of distinction of proportionality and precaution, as required under the Convention on Certain Conventional Weapons (CCW) and reiterated by the International Committee of the Red Cross.

Article 5: Application

Member States will be advised to publicly articulate national doctrines regarding force usage to enhance deterrence and AI security governance. This will be in the absence of treaty-based alignment or oversight to uphold the sovereign rights of Member States.
