

SPIRA

Webdesign and diagrams

Given below are diagrams of every major webpage of the website, explained in detail. This will make programming easier, though there are some things that the coders will have to figure out (with me obviously) such as the payment connection to gateway apps.

Starting with,

The homepage

The homepage is designed to be aesthetic and catchy, giving the consumers a simple explanation of what we are. It starts with two buttons “explore marketplace” and “list your equipment” which are essentially the two main functions of our website. It takes them to either a platform where they can rent equipment, or one where they can register their own equipment to be registered onto the marketplace.

The hero images are placeholders for aesthetic backgrounds we can add to avoid being bland. We then have a list of popular equipment taken from the marketplace, which is basically the most prominent feature of the website, it has to be there on the homepage. The final “About us” page will lead to another webpage that shows our objectives, motives, goals, etc... and who each of the core members are.

When the profile icon is clicked on the top right, this is what should appear:

Its quite basic, but thats all we need so far. It shows a profile icon, an about me, the amount of equipments rented and the amount of equipments listed. Finally, there is an option to log out of the account.

This is the standard design for a marketplace. It has a specifically allotted search-bar which when you search for a university, it will only show equipment from that university, and if you search an equipment, it will only show that equipment from different universities. It has a sidebar where you configure your filters, such as location, equipment type, price, and availability. Under equipment type you can select [physics] [chemistry] [biology] [computer science], etc... whereas in the price section you can configure your range of prices. For availability, there should ideally be a calendar like system, which the universities will input when they register their equipment. It should look something like this:

S	M	T	W	T	F	S
				1	2	3
4	5	6	7	8	9	10
11	12	15	14	15	16	17
18	19	20	21	22	23	24
25	26	27	28			

When someone clicks “view more”, they will be redirected to another page where they can see a comprehensive breakdown of the prices, information about the equipment, the terms and conditions of the university, and everything else required. This will appear something like this:

Technical Specs

Instruction Manual (PDF)

Terms and Conditions

University name
★★★★★

S	M	T	W	T	F	S
				1	2	3
4	5	6	7	8	9	10

Equipment Details

Safety requirements

Reviews

This might look confusing, the three boxes at the end switch between each other whenever one clicks [equipment details], [safety requirements] or [reviews], they switch between each other. It has one main image displayed on the top left, with four smaller images in the bottom. Whenever one clicks a smaller image, it should appear on top replacing the one there.

Below the images are the technical specs, instruction manuals and terms and conditions so that the renter is aware and able to understand everything about the equipment. To the right there is the name of the university, the rating of the equipment, and a calendar showing the availability of the equipment. There is also an area which shows the payment for people renting the equipment on-sight and people renting the equipment remotely (they will be different obviously). Once viewed and agreed upon, the renter can click “request to use” to proceed.

The screenshot shows the SPIRA Marketplace interface. On the left, there is a vertical sidebar with five steps: Step 1, Step 2, Step 3, Step 4, and Step 5. Step 1 is highlighted. The main content area is titled "Kindly describe the experiment conducted" and contains a large text input field with horizontal lines for typing.

Once they do this, there is a 5 step process to rent the equipment. There is a lot of communication required between the university and the renter to make it work. First of all, they must describe the experiment they want to be conducted with this equipment, with the methodology and everything.

This will allow the university to understand exactly what experiment they are requesting to be performed, and what kind of data they want.

Following this, they will create a list of all the samples required for this experiment to be conducted. For example, if I am testing the radiation attenuation of bismuth oxide, bismuth oxide will be a sample. It is basically a list of all the things the university will have to have, or pay for.

The screenshot shows the SPIRA Marketplace interface. On the left, there is a vertical sidebar with five steps: Step 1, Step 2, Step 3, Step 4, and Step 5. Step 2 is highlighted. The main content area is titled "Kindly list all of the samples required to conduct this experiment" and contains a table with 7 rows and 2 columns. The first column contains numbers 1 through 7, and the second column is empty for input. Below the table is a "Submit" button.

The screenshot shows the SPIRA Marketplace interface. On the left, there is a vertical sidebar with five steps: Step 1, Step 2, Step 3, Step 4, and Step 5. Step 3 is highlighted. The main content area is titled "Your Order is being Processed!" and contains a large clock icon. Below the clock is a text box that says "Kindly wait for the University to reach out via Email about the detailed price and specifications of your order!". At the bottom, there is a note: "Note: this may take some time depending on the schedule of your selected university."

After this is where it gets tricky. We need to figure out exactly how payment will work, because an experiment containing bismuth oxide and an experiment containing diamond will obviously be different, and the university will have to control the cost of the samples. Hence, this information will be submitted to the university (via email or if needed *sigh* another webpage). While this is going on, the renter will see step 3. It would be cool if the clock was animated.

The university will receive this request (see 'upcoming orders' section of SM for university later), and decide whether they want to perform this experiment or not. If they do not, an email will be sent about it to the renter. If they do, they will compile a total price including a breakdown of the equipment cost and the cost of all samples and the grand total. We should probably have a format or way for them to do that easily. Once this step is completed and the renter agrees to the terms and conditions of the university, they will be redirected to step 4. Note, step 3 might take a long time (like 2-3 days to a week even based on the schedule of the university). This is somewhat of a problem, if you have any recommendations or suggestions, tell me.

Step four is a simple area for the individual to agree to the terms and proceed. It will have one simple button:

The screenshot shows the SPIRA Marketplace interface at Step 4. On the left is a vertical sidebar with buttons for Step 1, Step 2, Step 3, Step 4 (which is highlighted), and Step 5. The main content area contains a text box with the instruction: "If you agree to the terms and conditions provided by the university for the equipment, then click to proceed to the payment section." Below this text box is a large button labeled "PROCEED".

Once they click proceed, they will be redirected to the payment section. The payment section is probably the most complex part of this. We plan to take 5%, we have to include taxes, different modes of payment, and send the rest to the university. Payment gateway apps are used to do the same and simplify the thing for us by a lot. After step 5, people should be rerouted to payment gateway sites like razor pay. with our requirements, they will do what is necessary and create a system where we can earn 5% of the revenue and the remaining 95% will be sent to the university.

The screenshot shows the SPIRA Marketplace interface at Step 5. On the left is a vertical sidebar with buttons for Step 1, Step 2, Step 3, Step 4, and Step 5 (which is highlighted). The main content area is divided into two sections. The top section, titled "Purchase Details", contains four rows of input fields: "Cost of Equipment", "Cost of Samples", "Total tax", and "TOTAL". The bottom section, titled "Mode of Payment", contains two options: "CARD" (represented by a credit card icon) and "UPI" (represented by a QR code icon).

Moving on, we now have to think from the perspective of a university or institution *listing* their equipment. The site will obviously look different for them. Universities should see it something like this:

Feedback

 -----

 -----

 -----

 -----

It first shows the name of the university, and a big large bold button to list your equipment. Below there is a list of their upcoming orders, which they can click to view everything that the renter has described in the section explained above. They should have the ability to accept or refuse the offer. The profit chart is something that is generally present in marketplaces, it shows the no. of orders they have accepted and the revenue they have generated from it. Beside this it shows their equipments which perform the best (based on no. of orders or a rating system, we could have one for most bought and one for highest rated). Below this is a list of their

equipment that one can scroll through on the x axis, it is quite straightforward and does not need to be explained. Below this is the most recent feedback on their equipments. People should also have the ability to write feedback on the university in general, they should both appear there.

The screenshot shows the 'SPIRA Marketplace' interface. On the left, there is a vertical sidebar with four buttons labeled 'Step 1', 'Step 2', 'Step 3', and 'Step 4'. 'Step 1' is highlighted. The main content area has a header with two buttons: 'Add name' and 'Category'. Below these are two large text input fields. The first field is labeled 'UPLOAD PRIMARY IMAGE (Only 1)' and the second is labeled 'Description'.

When the university wants to register/ list their equipment, they will follow a step-by-step system much like the one described above. The first step is obviously to tell us the name, category, description of the equipment along with the primary image.

The category is to define things like [physics] [chemistry] [biology] [computer science] and more, according to the [equipment type] function in the scientific marketplace.

Following this, we have step 2 which allows them to write the model number, the manufacturer and upload secondary images of the equipment. After this, they can upload PDFs for the technical specs, instruction manuals and the terms and conditions of the equipment and university that the renters *must* agree to for renting.

The screenshot shows the 'SPIRA Marketplace' interface for Step 2. The sidebar on the left has 'Step 2' highlighted. The main content area has a header with two buttons: 'Model Number' and 'Manufacturer'. Below these is a large text input field labeled 'Upload secondary images (upto 4)'. At the bottom, there are three buttons: 'Upload Technical specs', 'Upload Instruction Manual', and 'Upload terms and conditions'.

Step 3 requires the university to write their exact safety requirements, and step 4 asks them to write the costs for remote access and on sight access. Once they are on step 4, they may finish registering and the equipment should appear in the SM.

The image displays two wireframe screenshots of the SPIRA Marketplace registration process, showing the progression from Step 3 to Step 4.

Left Screenshot (Step 3):

- Header:** SPIRA Marketplace, with a search bar and a user profile icon.
- Navigation:** A vertical list of steps: Step 1, Step 2, Step 3 (highlighted), and Step 4.
- Content:** A large text area labeled "Description" for writing safety requirements.

Right Screenshot (Step 4):

- Header:** SPIRA Marketplace, with a search bar and a user profile icon.
- Navigation:** A vertical list of steps: Step 1, Step 2, Step 3, and Step 4 (highlighted).
- Form Fields:**
 - Equipment Cost: on sight (per hour) [Input Field]
 - Equipment Cost: remote (per hour) [Input Field]
- Note:** Note: this is only the cost of operating the equipment. the cost for purchasing and shipping samples is incurred by the renter, and can be negotiated with over text.
- Action:** A button labeled "Finish Registration".

NOTE: this is an overview of all the major webpages we will have in the website. There are some things we have yet to work on such as the log-in and sign up page, but those are quite standard. If there is anything lacking, any webpage, any function, anything at all, message on the group. Also, I apologize for the terrible formatting.

Good Luck!
